### **EXAMINER'S AMENDMENT**

- 1) An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
- 2) Authorization for this examiner's amendment was given in a telephone interview with Mr. Joseph C. Kirincich (Reg. No. 38,734) on December 8, 2004.

The application has been amended as follows:

#### **In the Claims:**

**Claims 19-20** have been **canceled** without prejudice.

**Claims 1 and 15** have been **amended** as follows:

In Claim 1, line 2, --subsidized by a mail campaign sender-- has been inserted after "indicium".

In Claim 1, line 4, "a" before "mail campaign sender" has been changed to --the--.

In Claim 15, line 1, "accessible by" has been changed to --in operative communication with--.

The above changes to the claims have been made to correct the informalities and to clarify the applicant's invention so as to place the instant application in condition for allowance.

### **REASONS FOR ALLOWANCE**

3) The following is an examiner's statement of reasons for allowance:

The instant invention is deemed to be directed to an unobvious improvement over US 6,428,219 (Stier et al.).

#### **W.R.T. Claim 1:**

Stier et al. discloses a method of operating a data center (128) for generating postage indicium information for use with printing a postage indicium on a business reply mail piece (col. 4, line 57 – col. 5, line 37; col. 6, lines 26-67; for the mail campaign sender), the method comprising the steps of:

receiving postage indicium information at the postage metering system from the data center (128; see Fig. 10);

printing the postage indicium on the business reply mail piece at the postage metering system (122, 124) using the postage indicium information.

However, Stier et al. does not specifically disclose the method comprising:

transmitting a registration ID number, provided by the mail campaign sender to a user, from the postage metering system to a data center, the registration ID number being associated with a delivery address previously defined by the mail campaign sender;

the postage indicium information generated using the registration ID number; and  
printing the postage indicium using the postage indicium information.

Art Unit: 3629

**W.R.T. Claim 4:**

Stier et al. discloses a method of operating a data center (128) for generating postage indicium information for use with printing a postage indicium on a business reply mail piece (col. 6, lines 26-67; for the mail campaign sender), the method comprising the steps of:

receiving a delivery address from a mail campaign sender (so as to print the address on the envelope, col. 4, line 57 – col. 5, line 37);

establishing a transaction session with a postage metering system (see Fig. 10);

receiving postage indicium information at the postage metering system from the data center (128; see Fig. 10); and

printing the postage indicium on the business reply mail piece at the postage metering system (122, 124) using the postage indicium information.

However, Stier et al. does not specifically disclose the method comprising:

generating and transmitting a registration ID number, which is corresponding to the delivery address previously defined by the mail campaign sender, to the data center; and

generating the postage indicium information using the registration ID number and including data relating the delivery address.

**W.R.T. Claim 9:**

Stier et al. discloses a method of operating a business reply mail processing system, the method comprising the steps of:

providing a delivery address, associated with a particular mail campaign which includes a business reply mail piece, to a data center (inherently, the delivery address must be provided to the data center so that the delivery address later can be printed on the envelop, col. 4, line 57 – col. 5, line 37);

receiving postage indicium information at the postage metering system from the data center (128; see Fig. 10); and

printing the postage indicium on the business reply mail piece at the postage metering system (122, 124) using the postage indicium information.

However, Stier et al. does not specifically disclose the method comprising:

generating and supplying a registration ID number, which is corresponding to the delivery address previously defined by the mail campaign sender, to the data center; and

generating the postage indicium information using the registration ID number and including data relating the delivery address.

**W.R.T. Claim 15:**

Stier et al. discloses a memory device assessable by a computing system, the memory device comprising:

a plurality of mail campaign sender accounts associated with respective mail campaign senders (inherently so as to process the business mailpieces, col. 4, line 57 – col. 5, line 37; col. 6, lines 1-57), wherein the postage indicium is printed on the business reply mail piece at the postage metering system (122, 124) using the postage indicium information.

However, Stier et al. does not disclose the memory device including: the each of the plurality of mail campaign sender accounts having a registration ID number associated with a delivery address and a particular mail campaign of which a business reply mail piece is a part.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
